

Intelligent Electronic Meter Initiated Controller

PUR₂O Water Softener

Provide your family with abundant clean, soft water on demand.

With a PUR2o Water Softening System, hard water is softened by removing calcium and magnesium. When hard water moves through the system's resin bed, hard ions are exchanged for soft ones.

Only treated, softened water is then delivered to every tap in your home.

Once the resin bed is saturated with hardness ions, it must be regenerated. Salt (sodium chloride) is typically used in the regeneration/cleaning process. Adding salt restores the resin to a clean state in order for the ion exchange process to begin again.

Efficiently and effectively handles the most challenging water conditions.

PUR2o Water Softeners are designed combining time tested principles of operation with the latest technological advancements to help protect the environment by reducing salt and water usage.

REDUCE HARD WATER AND ITS EFFECTS ON YOUR HOME

- reduce water contaminants
- reduce scale build-up
- reduce electricity costs
- reduce the use of soaps and detergents

STATE-OF-THE-ART TECHNOLOGY

- Intelligent Electronic Meter Initiated Controller
- Safety Overflow Control
- High-Capacity Resin
- Powered by the energy of moving water
- Functional design

Each system is sized according to individual home and homeowner's specific needs

- Extend the life of your appliances
- Better tasting water
- Make cleaning easier
- Softer laundry
- Cleaner dishes
